Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

The special technical features of claims [1-18] relates to [forming a first conductive pattern by discharging a conductive material containing a photosensitive material by droplet discharging; selectively exposing the first conductive film pattern to laser light; forming second conductive film pattern by developing the exposed first conductive pattern], while the special technical features of claims [19-25] relates to [a channel length of the channel formation region and a space between the source electrode and the drain electrode have the widths that are the same as that of the gate electrode].

There is no technical relationship among those inventions involving one or more of the same or corresponding technical features.

Therefore, these groups of inventions are not so linked as to form a single general inventive concept.
